MyDx: Find out What is in your Cannabis

MyDx is a simple and affordable portable analyzer that will detect the chemicals we cannot see. Simply connect the MyDx to your iOS, Android or Windows device then place a cannabis sample in the chamber and push measure for an in-depth analysis of your cannabis within a matter of seconds. The MyDx app will tell you exactly what the information means and why you should care.

Daniel Yazbeck, CEO of MyDx says, "The electronic nose in MyDx will sniff the chemicals in the cannabis sample, and it's going to tell you what it is. But more importantly, then you take our app, and that couples with the device, and then you're going to correlate how those chemicals made you feel."

The Nova from Ardent: Get More Punch from Every Bud

For cannabis to provide you with psychoactive effects it must go through a chemical process called decarboxylation first.

Typically people decarboxylate by smoking or cooking cannabis

However there is another way, enter Ardent Cannabis with their decarboxylation device called Nova.

According to Ardent there are many benefits to the Nova, but here are few that stand out:

1. The cannabis is activated without having to go through digestion or inhalation after going through the Nova
2. You get much more profound mileage out of each bud because the psychoactive effects are intensified, which is great if you are on a budget or you just want to get more bang for your buck.
3. Through the process of decarboxylation the cannabis is sterilized which decreases the risk of decontamination

Ardent's CEO, Shanel Lindsay says, "The Nova is for people who want to try marijuana but can't smoke it. It takes the scare out of cannabis, giving patients the ability to accurately dose and enjoy the benefits of edibles and sublinguals."
